**Analysis of the Social Network of Authors in Four Recent Articles  
on Autism, Mercury and Selected Childhood Vaccine Exposures**

**and**

**Assessment of the Role, Influence and Interests of the Statens  
Serum Institut in Issues of Vaccine Safety Studies**

**Safe Minds**

**May, 2004**

# CONTENTS

**Summary**

**A highly connected author network**

**The commercial interests of Statens Serum Institut**

**Conclusions**

# **SUMMARY (1)**

**Three recent studies based on data from a Danish patient registry have attempted to refute the link between mercury-containing vaccines and autism. These studies comprise the output of a deliberate and coordinated plan to attack the autism-mercury connection. Following behind a similar Danish registry analysis of the autism-MMR vaccine link, these three studies were all**

- published in rapid succession in prestigious journals**
- based on slightly different (but analytically non-comparable) views of the same event**
- prepared by author groups with substantial connections and overlaps**

**These author groups comprise a social network with strong personal and institutional ties. These ties create a significant conflict of interest that was not reported in any of the journals. The entire author network has ties to a for-profit, Danish vaccine manufacturer: the Statens Serum Institut (SSI). SSI authors hold positions of substantial influence in the author network, while SSI occupies a central position of leadership in the network of participating institutions**

- SSI directly employs over one-third (6 of 17) of the study authors**
- SSI “houses the central unit of the Danish Epidemiology Science Centre”, the employer for the first authors of 2 of 3 studies, and for 7 of 17 of the authors (four of whom are not directly employed by SSI)**
- SSI staff have co-authored at least six additional studies with two employees of the Danish National Centre for Register-based Research**
- CDC employees and consultants make up the largest non-Danish group (3 of 17)**

**This collection of three articles, more appropriately viewed as a single networked initiative dominated by SSI, were therefore directly influenced by the financial interests of a manufacturer of final products (historically) and components (currently) for thimerosal-containing vaccines.**

## **SUMMARY (2)**

**SSI is a for-profit, state-owned enterprise with roughly \$120 million in annual revenue. They report income statement and balance sheet information, including measures of return on invested capital. Their research activities support their business interests**

**The commercial interests of SSI are strongly tied to the success of their vaccine products and, especially to their exports outside Denmark**

- **vaccines represent half of SSI's revenues and over 80% of its profits**
- **vaccine exports appear highly profitable and represent SSI's fastest growing business segment**
- **important export markets include the United States and the United Kingdom, home to active vaccine safety controversies**

**SSI has a direct financial interest in the autism-mercury controversy, with possible product liability due to their past production and revenue risk based on the demand for their intermediate products.**

- **SSI manufactured the (now discontinued) mono-component pertussis vaccine under investigation in the three studies**
- **SSI exports diphtheria and tetanus toxoid products used in thimerosal-containing vaccines still sold in the United States and the United Kingdom**

# CONTENTS

**Summary**

**A highly connected author network**

**The commercial interests of Statens Serum Institut**

**Conclusions**

# **A HIGHLY CONNECTED AUTHOR NETWORK**

**Four articles from Denmark have examined autism vaccine controversies. Three of these have recently addressed the autism-mercury connection**

**The author network involved in preparing these studies is highly connected**

- **most authors work in Denmark**
- **many authors participated in more than one study and provide strong links across all four studies**
- **a few key institutions provide the home for the majority of the network**
- **Statens Serum Institut (SSI) employees play a central role in the network**

**Most network participants either work directly for SSI or work for institutions with strong ties to SSI**

DK-2300 Copenhagen S  
DENMARK

JUL 29 1998

Dear Ms. Knudsen:

This letter hereby issues Department of Health and Human Services Biologics License No. 1255 to Statens Seruminstitut, Copenhagen, Denmark, in accordance with the provisions of Section 351(a) of the Public Health Service Act as amended November 21, 1997 (FDAMA; Public Law 105-115), controlling the manufacture and sale of biological products. This license authorizes you to manufacture and import into this country to ship for sale, barter, or exchange those products for which your company has demonstrated compliance with establishment and product standards.

Under this license you are authorized to manufacture the products Tetanus Toxoid Concentrate (For Further Manufacturing Use) and Diphtheria Toxoid Concentrate (For Further Manufacturing Use) to be shipped to North American Vaccine, Inc., in a shared manufacturing arrangement for the manufacture of Diphtheria and Tetanus Toxoids and Acellular Pertussis Vaccine Adsorbed (DTaP).

**The package insert from SSI is attached.**

# STATENS SERUM INSTITUT DESCRIBES ITS REVENUE AND LIABILITY FINANCIAL STAKE IN VACCINE RISKS

## RISKS

### Vaccines

As a biological production, vaccine production, the main pillar in the development of revenue, is sensitive. For example, cultivation problems can occur as a consequence of quite small changes in the cultivation conditions. Some problems often emerge late in the production process, so rejects include not only raw materials but also the supplies and the work input.

### Insurance

The Institute's product liability insurance is expected to lead to a significant increase in expenses the coming years.

# CONTENTS

**Summary**

**A highly connected author network**

**The commercial interests of Statens Serum Institut**

**Conclusions**

# CONCLUSION

**The recent series of articles on mercury and autism and Denmark were conducted and sponsored by a single network of authors.**

**Those authors were tied, either indirectly or as employees, to a for-profit vaccine manufacturer (SSI) with a direct financial interest in the outcome of the analysis. Their motivations as investigators were closely tied to the products they were investigating. They have a clear conflict of interest.**

**Statens Serum Institut relies heavily on its vaccine products for revenue, growth and profitability. The growth and profitability, in particular, of its export vaccine business provides strong incentives for SSI to build ties with public health officials and manufacturing partners in the United States and United Kingdom. SSI has a clear and strong interest in the policy debates surrounding the autism-mercury controversy. They cannot be considered an objective party.**

**SSI has a direct financial interest in the assessment of past mercury-containing vaccine safety issues and the future viability of mercury-containing products. Their participation in any analysis directly compromises the investigation. They should be excluded from further work in vaccine safety assessment.**
