## Infant Health: The Truth About Vaccinations

There's one big issue that no one can afford to leave out when talking about the health of infants, vaccinations are important but so many parents have different views and sometimes vaccinations are avoided. Parents that simply refuse to find the facts about vaccinations and do not have their babies vaccinated are playing a deadly game of Russian roulette.

Considering it's estimated that by the time a child reaches the age of two years of age they have probably already received twenty or more vaccinations which clearly spells out the fears most parents have

about vaccinations, some people believe it's just too much. These vaccinations that a child gets over the course of the first two years include vaccines to protect them primarily against the ten most communicable diseases below.

- Σ Diptheria
- Σ Whooping cough
- Σ Tetanus
- Σ Polio
- Σ Haemphilus Influenza
- Σ Measles
